

MSFGA Official Diagram for Measuring Mini Silkies

Bucks must be at 24” at the withers or under
Doe must be 23” at the withers or under

Proper goat posture for measuring

The head must be held above the shoulders as shown here.

The measuring stick should be placed over the withers, which is the highest point of the shoulders at the base of the neck.

The front feet and legs should be directly under the shoulders.

The rear feet and legs should be back under the rear end of the goat, not up under the barrel or stretched way out behind the goat in an unnatural manner.

PLEASE NOTE:

Any Buck or Doe found to exceed the height limits above will be immediately disqualified

Disqualified means that the goat is not eligible to go in the show ring under any circumstances. The goat can not be shown at this show or any other MSFGA sanctioned show.
